

# Tailor-made solutions: Your connection to global market data

**You need access to current prices and indices on each trading day?  
You want to integrate a broad range of data in your own applications  
and processes? Don't settle for second-best solutions for your  
specific requirements – choose our Data Manager!**

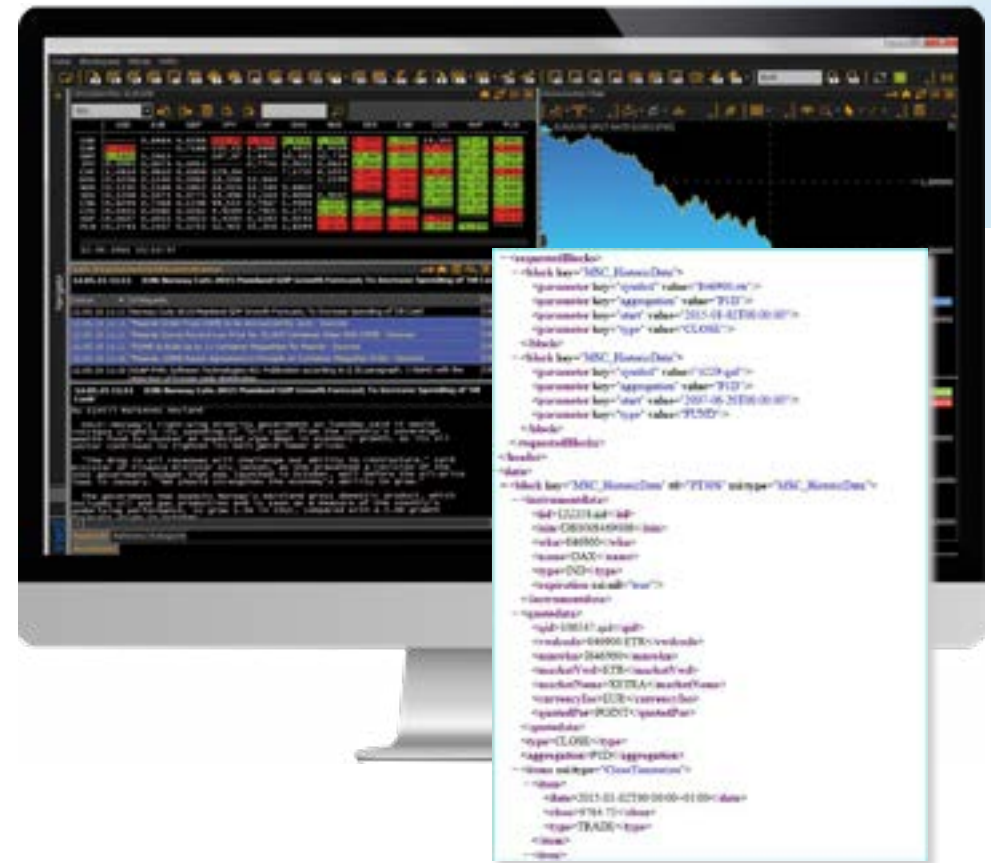

Our Data Manager solutions provide you with access to approx. 120 stock exchanges, 35 futures and commodities exchanges, 180 OTC contributors and more than 500 capital management and investment companies, offering you quick and easy connectivity to our comprehensive market data universe.

You can easily integrate both stock exchange and OTC market data in your own applications and processes, whether they relate to shares, indices, bonds, foreign currency, funds, certificates, warrants or other derivatives. The corresponding master data and historical prices over a period of more than 20 year are centrally updated in our datacentres and made available for retrieval.

In doing so, we attach great importance to customized and benefit-optimized delivery routes for a variety of application areas.

The customized compilation of data offers you an optimum cost / benefit ratio. Select the content packages that are relevant for you and the provision of the data in the format required by you, e.g.:

- Java API
- .NET API
- XML
- CSV
- ASCII

Standardized interfaces ensure the smooth connection to your existing IT landscape and a stable and secure data transfer with the requested data freshness (real-time, delayed, end-of-day, snapshot files, timelines, data histories).

As an additional service, we assume the complete hosting of your database thereby reducing your personnel and IT expenses. Data hosting takes place on redundant

servers in the ISO 9001/IEC 27001 certified and K-case secure Equinix data center (FR2 and FR7).

Furthermore, cooperation partners are available to support the connection to the Data Manager data interfaces.

## Your advantages at a glance

- Up-to-date and tailored data and information
- Price data, key figures, master data and news through a connection
- High customer satisfaction and cost efficiency through modular content packages
- Successful integration with fast time-to-market speed
- Different updating speeds – from real-time to end-of-day delivery
- Good connectivity to existing IT landscapes
